

Resources for Automating Inventory Data Uploads

Automating inventory data uploads is a WarehouseTWO “best practice”. Benefits of doing so include:

- ✓ Virtually 100% probability that your inventory data will be posted.
- ✓ Elimination of manual work, including exporting, manipulating, pricing and uploading the data.
- ✓ Posted items will appear higher in search results. (Freshest postings appear at the top.)
- ✓ Easier to price each posted item. (Priced items sort higher in a search result, and appear in BARGAIN HUNT searches.

Because its members run their businesses on many different ERP software systems, WarehouseTWO does not directly assist in automating inventory data uploads for its members. Instead, WarehouseTWO suggests that its members contract with either its ERP software provider or an independent programming consultant familiar with its ERP software. Suggested resources:
